## THE EXTENT IN STATUTE ACRES AND THE PRODUCE OF THE CROPS.

---

TO THE

SECRETARY OF THE DEPARTMENT OF AGRICULTURE  
AND TECHNICAL INSTRUCTION FOR IRELAND.

SIR,

I have the honour to submit the accompanying Tables relating to the produce of the crops in Ireland in the year 1901. The tables showing the acreage under crops, which I submitted in a necessarily unrevised form in August last, have been carefully revised in the interim, and the figures regarding this subject set out in the present Report are as correct as can be expected in the case of such statistics. I look forward to having all the available details regarding agriculture in Ireland in 1901 fully arranged and submitted early in the coming year in the annual detailed Report on Agricultural Statistics. As I shall have occasion in that Report to go somewhat fully into the comparative significance of these statistics, I do not, in the present statement, go much beyond some general observations on the crop returns of 1901 as compared with those of 1900 and the average of the preceding ten years.

Comparing the extents under the chief cereal crops in 1901 with those for 1900, we find a decrease of 10,887

Acreage under Crops. acres, or 20·2 per cent. in wheat; a decrease of 5,715 acres, or 0·5 per cent., in oats; a rather notable decrease of 12,462 acres, or 7·2 per cent., in barley; and a decrease of 406 acres, or 3·6 per cent. under rye. In green crops, potatoes decreased by 18,758 acres, or 2·9 per cent.; turnips decreased by 8,100 acres, or 2·7 per cent.; and mangel wurzel and

beet root increased by 8,654 acres, or 12·6 per cent. In other crops—flax increased by 7,991 acres, or 16·8 per cent., following an increase of 35·6 per cent. in 1900 as compared with 1899; the area for hay from clover, sainfoin, and grasses under rotation increased by 9,950 acres, or 1·6 per cent.; and the area for hay from permanent pasture or grass not broken up in rotation, increased by 2,927 acres, or 0·2 per cent. Compared with the average acreage for the 10 years 1891–1900, mangel wurzel and beet root showed an increase of 22,274 acres, or 40·4 per cent., and permanent pasture or grass not broken up in rotation an increase of 34,235 acres, or 2·2 per cent.; but each of the other chief crops exhibits a decrease in the extent devoted to it, the decrease in wheat being 11,155 acres, or 20·6 per cent., in oats, 94,251 acres, or 8·1 per cent., in barley, 8,784 acres, or 5·2 per cent., in rye, 1,614 acres, or 12·8 per cent., in potatoes 65,620 acres, or 9·4 per cent., in turnips 15,422 acres, or 5·1 per cent., in flax 8,936 acres, or 13·9 per cent., and in clover, sainfoin, and grasses under rotation, 14,098 acres, or 2·2 per cent.

TABLE showing the average yearly Extent of Land under the principal Crops in the ten years 1891–1900; the extent in 1900 and 1901 respectively; the Increase or Decrease in the extent under each crop in 1901 compared with 1900; and the extent in 1900 above or below the average for the ten years 1891–1900.

Coming to the question of the rates of produce per acre of the crops, we find, on comparison with those of

Rates of Produce 1900, that the rate for wheat rose from 16·7 of the Crops. to 18·3 cwts.; for oats from 15·8 to 16·2 cwts.; for barley from 16·0 to 18·0 cwts.;

for bere from 14·1 to 14·4 cwts.; for rye from 12·8 to 13·7 cwts.; for potatoes from 2·8 to 5·3 tons; for turnips from 14·9 to 16·9 tons; for mangel wurzel and beet root from 17·2 to 18·8 tons; for flax from 34·3 to 38·3 stones; while the rate for hay from clover, sainfoin, and grasses under rotation fell from 2·2 to 2·1 tons; and for hay from permanent pasture or grass not broken up in rotation, from 2·5 to 2·2 tons.

Comparing the average rates of produce per acre in 1901 with the mean rates for the 10 years 1891-1900, we find the following increases in 1901:—Wheat from 16·8 to 18·3 cwts., oats from 15·2 to 16·2 cwts., barley from 17·1 to 18·0 cwts., bere from 13·6 to 14·4 cwts., rye from 12·8 to 13·7 cwts., potatoes from 3·7 to 5·3 tons, turnips from 14·7 to 16·9 tons, mangel wurzel from 15·7 to 18·8 tons, flax from 28·8 to 38·3 stones (an increase of 33·0 per cent.); There is a decrease for hay from permanent pasture or grass not broken up

in rotation from 2·3 to 2·2 tons; while the rate for hay from clover, sainfoin, and grasses under is the same for both periods.

The total estimated produce of wheat in 1901 was 787,568 cwts., being 12·6 per cent. under the produce for the preceding year, and 13·3 per cent. under the average for the ten years 1891-1900; the total quantity of oats was 17,782,956 cwts., being 1·5 per cent. more than the produce in 1900, but 1·8 per cent. below the average for the ten years 1891-1900; the quantity of barley was 2,915,498 cwts., being 4·9 per cent. over the produce in 1900, and 1,238 cwts., or 0·04 per cent. over the average for the ten years 1891-1900; here yielded 2,164 cwts., against 2,501 cwts. in 1900, and an average of 3,174 cwts. for the ten years 1891-1900; and the produce of rye was 150,354 cwts., being 2·6 per cent. over that for the preceding year, but 6·4 per cent. below the average for the ten years 1891-1900.

The total produce of potatoes was 3,372,214 tons, being 83·1 per cent. greater than the yield in 1900, and an increase equivalent to 30·8 per cent. as compared with the average produce for the ten years 1891-1900. The turnip crop was 4,884,301 tons, being 10·3 per cent. above the produce in 1900, and 8·9 per cent. above the average for the ten years 1891-1900; and the total quantity of mangel wurzel and beet root was 1,449,266 tons, being 22·1 per cent. more than in 1900, and 66·5 per cent. over the average for the ten years 1891-1900.

The yield of flax was 13,267 tons, being 80·3 per cent. over the produce in 1900, and 16·2 per cent. over the average quantity for the ten years 1891-1900.

The produce of hay from clover, sainfoin, and grasses under rotation was 1,306,687 tons, showing a decrease equal to 4·4 per cent. as compared with the quantity in 1900, and the quantity of hay from permanent pasture and grass not broken up in rotation was 3,433,055 tons, being 10·8 per cent. under the quantity of such produce in 1900. The aggregate quantity of hay under both headings (4,739,742 tons) is 474,226 tons (or 9·1 per cent.) below that for 1900, and shows a decrease equivalent to 2·0 per cent. as compared with the average produce for the ten years 1891-1900.

TABLE showing the Mean Rates of Produce per Statute Acre of the principal Crops for the 10 years 1891-1900; the Average Rates for 1900 and 1901 respectively; and the Increase or Decrease in the Rate for each crop in 1901 compared with that for 1900, and with the Mean Rate for the 10 years 1891-1900.

**STATEMENT** showing the estimated total produce and yield per acre of the principal cereals in the year 1901, with comparative statements for the year 1900, and for the average of the ten years 1891-1900, for the United Kingdom, and for each country separately. The figures for England, Wales, Scotland, and Great Britain, have been supplied by the Board of Agriculture of England.

In 1880 a Special Return to Parliament was made as to the acreage under each variety of potato, Potato Crop. their yield, and their liability to disease at that time. Since that period an annual return has been made of the acreage and yield of each variety of potato in Ireland, which has been published as part of the Agricultural Statistics; that for 1901 will be found in Table V., on pages 36-37. As already stated, the acreage under potatoes in Ireland in 1901 was 635,321, as compared with 654,079 in the year 1900, showing a decrease of 18,758 acres.

The acreage under each of the principal varieties of potatoes planted in 1901, with the percentage to the total, is shown in the following statement:—

	Acres.	Per Cent.		Acres.	Per Cent.
Champions, ... ...	421,866	66·4	Up-to-Dates, ... ...	11,546	
Flanders, ... ...	43,449	7·6	Bruce, ... ...	3,970	
Beauty of Bath, ...	41,373	6·6	American Roses, ...	3,483	
Irish White, ... ...	27,170	4·3	Black Skories, ...	2,432	
Sultons or Sutton's Abundance,	25,902	4·1	Andesirus or Ardearn Beauitis,	1,942	
Magnum Beaumis, ...	14,287	2·2	Main Crop, ... ...	1,730	6·0
Skerry Blues, ... ...	14,086	2·2	Early Roses, ... ...	1,723	
			Gawkies, ... ...	1,528	
			Elephants or White Elephants,	1,341	
			Leather Coats, ... ...	1,224	
			Beauties of Hebron, ...	879	
			All others, ... ...	9,824	

The main feature observable in the foregoing statement is that 66·4 per cent. of the acreage under the potato crop in Ireland consists of Champions, leaving only 33·6 per cent. for all other varieties—the percentage of some of these being so small as to be barely appreciable when put into figures.

The "Champion" potato was first introduced in quantity into Ireland in the year 1880, after the failure of the potato crop in 1879. Since that year it has constituted the main potato crop of the country, as shown by the following statement, from which, however, it will also be observed that from 1891 to 1900 the proportion under Champions showed a gradual decline from 79·7 per cent. to 66·1 per cent., but that in 1901 the proportion shows a slight increase to 66·4 per cent.

TABLE showing for the years 1881-1901 the total area under potatoes, and the extent under "Champions," with the number of acres under that variety in every 100 acres under potatoes.

A reference to Table V., pages 36-37, where the acreage under potatoes is set out for each variety by counties and provinces, and for the whole of Ireland, will show that in the counties of Dublin, Kildare, and Wicklow, and in the following Ulster counties, viz.:—Antrim, Donegal, Down, Londonderry, and Tyrone, there is less tendency to rely on Champions than in the other counties of Ireland.

The potato crop of 1901 stands out as a remarkably good one in yield. We must go back over half a century to find any season in which the estimated produce was so high as 5·3 tons per statute acre. Not till we reach the year 1849, in fact, in which year an estimated yield of 5·6 tons per statute acre is recorded, is this year's potato crop rivalled. It comes out in sharper contrast, inasmuch as the yield of the crop of 1900 was the fifth lowest in a period of twenty years. A reference to the accompanying diagram will show the very considerable yearly fluctuations in the produce of this staple crop. The average yield per ton per acre of potatoes for the whole of Ireland in each year for the period 1882-1901 is shown in the following tabular statement:—

### BEE-KEEPING.

#### *Bee-keeping Statistics for the Season, 1900.*

The inquiries made in the preceding fifteen years relative to the extent to which bee-keeping is followed in Ireland, and the degree of success attained in this special branch of rural economy, were repeated last year with reference to the season of 1900, and the results will be found set forth in Table VII. on pages 40-41. In 1890, at the request of the Irish Bee Keepers' Association, the Form previously used for collecting information on the subject was varied in some respects, and additional details were obtained.

According to the Returns received, the quantity of honey produced in 1900 was nearly double the average quantity for the preceding ten years. It was, however, 16·4 per cent. below the quantity for the year 1899, the returns for which showed an increase of 41·7 per cent. as compared with the quantity in 1898.

The quantity of honey produced, according to the Returns, was 623,559 lbs.; of this 143,368 lbs. were produced in the province of Leinster; 211,821 lbs. in Munster; 155,962 lbs. in Ulster; and 112,408 in Connaught. Of the 623,559 lbs., 403,207 lbs. were produced "in Hives having Movahle Combs," and 220,352 lbs. "in other Hives." It was stated that 260,074 lbs. was "Run Honey," and 363,485 lbs. "Section Honey."

The number of stocks brought through the Winter of 1900-1901, amounted to 33,171; of which 16,754 were in the hives

having movable combs, and 16,417 in other hives. See Table VII. on pages 40-41.

According to the returns collected there were 6,743 lbs. of wax manufactured in 1900; of which 3,394 lbs. were from hives having movable combs, and 3,349 lbs. from other hives.

The Returns received in 1900 gave the quantity of honey produced in 1899 as 745,692 lbs.; the number of stocks brought through the winter of 1899-1900 as 31,045, and the quantity of wax manufactured in 1899 as 4,873 lbs.

The following Table shows the quantity of Honey returned as produced in Ireland during each of the eleven years 1890-1900, with the average annual quantity for the ten years 1890-99.

TABLE showing for each of the Eleven Years 1890-1900 the Quantity of HONEY Produced in Ireland, distinguishing the Quantity Produced in Hives having Movable Combs from that Produced in other Hives, and RUN HONEY from SECTION HONEY; with the Average Annual Quantity for the Ten Years, 1890-99.

From this Table it will be seen that the quantity produced in 1900 was very much greater than that for any of the years preceding 1899; it is 16·4 per cent. less than the quantity returned for the latter year; but shows an increase of 84·0 per cent. as compared with the average for the ten years 1890-99.

I have the honour to be,

SIR,

Your obedient Servant,

WILLIAM P. COYNE,

Superintendent of Statistics and  
Intelligence Branch.
